Detailed Action

Response to Argument

1. Applicant's remark, see amendment, filed 8/26/2008; with respect to claims 9 and 13 have been fully considered and accepted. The objection of claim 13 has been withdrawn. Examiner acknowledges the cancellation of claim 9. No outstanding issue remains.

Allowance

2. Claims 1-8 and 10-14 are allowed. The following is an examiner's statement of reasons for allowance:

In reference to claims 1, 8, 10, 12 and 13: Kita (SHIMADZU Article, 'Attempts at Simplified Measurement of Odors in Japan Using Odor Sensors') teaches a method for determining a method that permits an identification of similarity of measured odor to a pre-measured odor (see Kita, page 145, second and third paragraphs). The method includes two measured vectors, light components and heavy components correspond to sensor (A) and sensor (B) respectively. The length of the vectors (see Kita, page 145, Fig. 3 and the second paragraph) defines the sent strength (intensity). The decay rate constant during the measurement associated to each measurement is relative to the measurement of the odor and is inherent in the measurement process. This is the state of the art.

The primary reason for the allowance of claim 1 is the inclusion of the limitation: "...measuring simultaneously a second strength of a second scent of said object with a second electronic sensor, ... calculating current scent ratio of said first and second scent strength, and calculating said age of said object starting from a reference time for which a reference scent ratio of said scent strengths has been registered."

The primary reason for the allowance of claim 8 is the inclusion of the limitation: "...measuring simultaneously a second strength of a second scent of said goods with a second electronic sensor, ... calculating current scent ratio of said first and second scent strength, and calculating said freshness of said goods starting from a reference time for which a reference scent ratio of said scent strengths has been registered."

The primary reason for the allowance of claim 10 is the inclusion of the limitation: "...introducing into an impermeable seal attached to said object a first volatile component; introducing into said impermeable seal a second volatile component; simultaneously determining a first scent strength of said first volatile component and a second scent strength of said second volatile component at a time when said impermeable seal is unbroken; determining a reference scent ratio from the first scent strength and second scent strength; and determining whether said impermeable seal is broken based on the reference scent ratio."

The primary reason for the allowance of claim 12 is the inclusion of the limitation: "...a first electronic sensor that generates a first signal in response to a first scent of said first volatile component; a second electronic sensor that generates a second signal in response to a second scent said second volatile component; a calculating unit for

calculating a current scent ratio based on said first and second signals, and for extracting said age of said object from a reference time for which a reference scent ratio is registered and a display for displaying an indicator of said age."

The primary reason for the allowance of claim 13 is the inclusion of the limitation: "...sensing said volatile characteristics via a set of sensors that generate distinctive signature that are associated with spraying both said first volatile component and said volatile component on said object."

It is these limitations, as recited in combination with the dependent claims 2-7, 11 and 14 which are found in each of the claims but are not found, taught or suggested in the prior art of record, that makes the claims allowable over the prior art.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
